A Visual Programming Environment for GLU	113
<i>Dhanraj Rajender and Tony Faustini</i>	

Program Chairman's Message

These are the Proceedings of the Seventh Annual International Symposium on Lucid and Intensional Programming. I must confess that back in Victoria, Canada, in 1988, when the first of these ISLIP's was held, I really didn't expect them to be as persistent as they have proved to be. They have also matured and evolved. The papers at this year's ISLIP seem to fall into mini-sessions, and the whole collection is, well, a whole.

This ISLIP is a 20-year anniversary issue. Not 20 years of ISLIP but 20 years of Lucid. Twenty years ago, Bill Wadge and I were working feverishly on this new ...idea. We had begun the first tech report.

In 1985 the first Lucid book came out. In 1995 we will have the second. The publishers have the manuscript and we have an ISBN number and a publication date: early January. Like the first, the second book is an attempt to erect milestones or reference points in the headlong development of Lucid and intensional programming. This ISLIP shows that that headlong development has many heads.

Ed Ashcroft
